godraw READ ME

What's included in the Download

GoDraw2Demo.fmp12

This is a fully functioning, locked version of GoDraw2. The only difference between the demo and fully licensed version of GoDraw is that the demo places a waterMark on the image when you save it. Otherwise everything else the same.

It also contains two examples of how GoDraw can be used embedded in an application.

GoDraw Example.fmp12

This is an example of how to use GoDraw from another File. This is the easiest way to use GoDraw. You simply call scripts in the GoDraw file to make it do what you need to do. You can think of it almost like a plugin.

The resulting edited drawings are watermarked as well.

Getting Started

Simply open either of the two files and try the demos. When you are ready to buy just, click the big green BUY buttons on the Home screens.
